

DIN EN 9100:2018- Fundamentals of quality management in the aerospace industry

This training offers a concise introduction to DIN EN 9100:2018 for the aerospace, space, and defense industry. Participants learn how a quality management system must be structured to meet the industry's requirements. It is suitable for companies that develop, manufacture, or maintain their own products.

Training objectives

- Understand the structure and content of EN 9100:2018
- Overview of aviation-specific terms such as key characteristics and counterfeit parts
- Knowledge of the essential requirements for quality management systems in the aviation, space, and defense industry
- Ability to put the requirements into practice in your own company
- Application of what has been learned in exercises and knowledge tests to ensure learning success

Target group

- Employees involved in the implementation or further development of the quality management system
 - Professionals and managers from sales, production and quality planning, procurement/supplier management, engineering, production, and quality assurance
 - Internal auditors with a focus on quality management
 - Quality Management Representatives (QMRs)
- 

Content

- Fundamentals of quality management in the aerospace industry
